

Amendments to the Specification

Please replace the paragraph at page 8, lines 7-15, with the following amended paragraph:

Also, the plurality of light emitting elements 23 are mounted on the substrate 22 in a manner that the light emitting elements 23 extend generally perpendicular to the substrate 22. In other words, the light emitting elements 23 may be directed relatively diagonally. However, the inner lens 24 and the outer lens 25 that cover the light emitting elements 23 has a directivity that directs light emitted from the light emitting elements 23 (arrows 70a in Fig. 4) to the rear (arrows 70b in Fig. 4). Preferably, the inner lens 24 and the outer lens 25 may direct the light emitted from the light emitting elements 23 (arrows 70a in Fig. 4) generally horizontally (arrows 70b in Fig. 4) to the rear of the motorcycle. As a result, the tail lamp 20 can be made thinner.
